ASOS MAINTENANCE NOTE 49, REVISION A (for Electronics Technicians)
Maintenance Branch
W/OPS12: AW

## Automated Surface Observing System (ASOS) Next Generation Runway Visual Range (NGRVR) Information

#### **GENERAL:**

This maintenance note provides information about the NGRVR. The Federal Aviation Administration is connecting the NGRVR interface computer to the ASOS by connecting an external cable to J42, located on the acquisition control unit input/output (I/O) panel 1A9. Sixty-eight sites, identified in attachment A, will be configured as RVR on serial I/O (SIO) board 1 (RS-422) port 3. The National Weather Service Headquarters (WSH) checks and configures each site not currently configured for RVR. ASOS technicians need not take any action or responsibility for configuring the RVR for these 68 ASOS sites.

This revision addresses the following changes:

- 1. In attachment A, the replacement of Site Identification Code ATT with AUS and Mueller Municipal Airport with Austin/Bergstrom Airport
- 2. The correction of a wiring error in the SIO cable harness on Acquisition Control Units (ACU) with serial numbers less than 289 and a correction to the ASN to the RS-422 cable adapter.

#### PROCEDURE:

**NOTE:** The following cable installation should be verified before completing the NGRVR connection procedures specified in this maintenance note:

ACUs with serial numbers less than 289 must have an RS-422 cable adapter (ASN: S100-1A9W77; NSN: 5995-01-446-9779) installed on the inside of the J42 connector. This cable adapter corrects a wiring error in the SIO cable harness on ACUs with serial numbers less than 289. Connect P18 of the cable harness to J42 or to the cable adapter, as appropriate.

Refer to *Site Technical Manual* Table 2.4.2 Port Assignments for SIOs 1 Through 3" for additional information.

Instructions for NWS Headquarters personnel on how to connect NGRVR cables:

- 1. Log on to the ASOS site to enable the RVR. Refer to attachment A for site ID codes.
- 2. From the 1 minute page, key **REVIEW-SITE-CONFIG-COMMS**.
- 3. Configure SIO board 1 port 3 as RVR.

- 4. Set the following parameters: **ENABLE, 2400, EVEN, 7, 1, NONE, HARDWIRE**.
- 5. Remove any other SIO ports configured for RVR.
- 6. Log off.

#### **EFFECT ON OTHER INSTRUCTIONS:**

Supersedes Maintenance Note 49 original release.

#### **REPORT MAINTENANCE ACTION:**

None.

Mark S. Paese Director, Maintenance, Logistics, and Acquisition Division
